

MEMORANDUM

To	Member States		
From	AusDBF		
Date	11 August 2020	Document No	M-0043
Subject	revSPORT and FinishLynx integration		

In 2019 AusDBF worked with revSPORT and the Brook Group to be able to export results from the FinishLynx software into revSPORT, which could then be imported and displayed on the website for members to view. FinishLynx posts the results immediately upon race completion to revSPORT via 'Regattas API'.

For this to work revSPORT created a Level 2 API which was required to integrate the data (race results) from FinishLynx to revSPORT with the ability to view the results live via the website link.

Whilst this was initially created for AusChamps, revSPORT developed the integration so that it could be easily utilised via the Member State portals. AusDBF is paying an annual fee of \$2500 for this service, which all the Member States are able to benefit from using this feature.

AusDBF encourages all Member States who use the FinishLynx software to produce their race results to trial this service. It enables competitors to access the results and progressions via their phones at regattas.
